

Arithmetic

One and one make two.
Two and two make four.
Two and three are five.
Let's count some more, keep this song alive.

Six and seven are thirteen.
Eight plus nine make seventeen.
Ten and ten is twenty.
I didn't know there were so many.

I can count and you can count .
I can add and you can add.
Together we will make such a team.
Arithmetic is easy.
Simple and breezy.
When you and me add one and two and three.

Tens get a little busy.
Twenties make me dizzy.
Thirty and forty and fifty.
We're halfway there, that's nifty.

Sixty, seventy, and eighty.
Ninety and then
you get to one hundred .
Then you start all over again/

I can count and you can count .
I can add and you can add.
Together we will make such a team.
Arithmetic is easy.
Simple and breezy.
When you and me add one and two and three.

Numbers that go up and up.
They go so high you'll have to jump
to reach the top of the number tree.

It's a long, long, long way to go.
Goes on forever don't you know.
There's just no end to the arithmetic game.

I can count and you can count .
I can add and you can add.
Together we will make such a team.
Arithmetic is easy.
Simple and breezy.
When you and me add one and two and three.

When you and me add one and two and three.
